

There are no relationships between tables time-sheet-2014 and Client_ID_Name, we need to find a table which has both job_id and client_id to act as a bridge-table.

We extract table job-list-2014-2017 from table job-list, and delete all duplicate records in field job_id of table job-list-2014-2017.

Extract table client-id-name, delete all duplicate records in field client-id.
